

Prof. dr. Andreja Istenic Starcic

University of primorska, Faculty of Education, Slovenia

University of Ljubljana, Faculty of Civil and Geodetic Engineering, Slovenia

University of North Texas, Faculty of Information Science, US

Short Term Scientific Mission (STSM) Report

Host institution: Faculty of Social Sciences, University of Adam Mickiewicz

Hoste researcher: prof. dr. Emanuel Kulczycki

Period: 14th – 27th January 2018

COST ACTION 15137

European Network for Research Evaluation in the Social Sciences and the Humanities
(ENRESSH)

Topic 3: Comparison of national and regional databases of social sciences and
humanities research outcomes

STSM Reference Number: COST-STSM-CA15137-35312, CA15137

1 Summary

The main objective of the STSM ENRESSH is aimed at strengthening existing networks and fostering collaborations by facilitating researchers participating in a COST Action to visit an institution in another Participating COST Country.

My STSM was carried out at Faculty of Social Sciences, University of Adam Mickiewicz. The visit took place from 14th – 27th January 2018. My work took place in the office at Faculty of Education. I was working with Polish researchers and also had a workshop with PhD students in the field of Information science and Philosophy.

We had a discussion about application submitted by host prof. Kulczycki to Polish ministry.

During the second week, Tim Engels was present from University of Antwerp. Main discussions were focused on SSH output structure in disciplines and comparison of main databases: The VABB-SHW (Flanders) and the PBN (Poland) and COBISS (Slovenia). We have analyzed characteristics of the diverse dissemination channels used in the SSH and focused on the publication patterns in SSH.

Main presentations were focused on current research tasks, discussing the design and structure of the Flemish, Polish and Slovene system.

The main objectives of this STSM mission were achieved: comparing three databases (the COBISS, the PBN and the VABB-SHW), determining aspects of the research outputs in the SSH that can be compared, preparing one or more joint publications, and form the basis of a prolonged collaboration between the Faculty of Social Sciences at the Adam Mickiewicz University in Poznań, the Faculty of Civil and Geodetic Engineering at the University of Ljubljana, Faculty of Education University of primorska and the Centre for R&D monitoring (ECOOM) at the University of Antwerp.

2 Contribution to the Goals of the ENRESSH action

My STSM has contributed to Tasks 1 and 2 of Workgroup 3: “Confront productivity and structure of outputs in various SSH disciplines, using data from existing databases and repositories. Aims of STSM

The analysis of the data infrastructure of research outputs in the SSH used in Poland, Slovenia and Flanders. Compared were the three main databases: the COBISS (Slovenia), the PBN (Poland) and the VABB-SHW (Flanders). It was assessed on what level of aggregation the data from the COBIOSS, the PBN and the VABB-SHW can be compared and confronted. Identified were common and different dissemination profiles according to the data from the COBISS, the PBN and the VABB-SHW.

3 Description of the main results obtained

The workplan of my STSM was focusing on activities with all the objectives fulfilled:

- sharing knowledge concerning national databases,
- establishing a prolonged collaboration between the University of Ljubljana Faculty of Civil and Geodetic Engineering (University of Ljubljana), Faculty of Education (University of Primorska) and the Faculty of Social Sciences (Adam Mickiewicz University in Poznań) and ECOOM-Antwerp,
- finding a way in which we can compare disciplines in the SSH in different countries, despite different classifications (national discipline classifications versus the OECD fields of science and technology classification),
- preparing the datasets for analysing the publication patterns,
- comparing characteristics of the publication language in the SSH (Slovenia, Poland and Flanders).

About COBISS platform <https://www.cobiss.net/cobiss-platform.htm>

Summary from COBISS web site.

In 1991, IZUM promoted the COBISS (Co-operative Online Bibliographic System and Services) as an upgrade of the shared cataloguing system.

COBISS represents an organisational model of joining libraries into a national library information system with shared cataloguing, the COBIB union bibliographic/catalogue database and local bibliographic databases of participating libraries, the COLIB database on libraries, the CONOR authority database, and with a number of other functions. Functioning of the system is preconditioned by the following professional outlines and technological assumptions:

- standardised and shared cataloguing of library materials as well as a uniform management of catalogues and bibliographies,
- adequately skilled cataloguers,
- linking of libraries via computer and communications network.

COBISS technological platform

COBISS3 is the third generation of software for library automation and access to various databases, developed and maintained by IZUM. On the server side, servers with Windows operating system and Java-based application servers are used. For the needs of a back-end database, the Oracle relation database is used on the servers with the Linux operating system. On the client side, as well, Java-based applications are used, which allows workplaces at the libraries to be provided with personal computers or laptops with different operating systems (mostly Windows, some also Linux and MacOS). For the COBISS3 software to run smoothly, corresponding newer personal computers and with at least 256 kb/s Internet access are suitable.

Publication types and criteria for inclusion in the Slovene COBISS; Flanders VABB-SHW and Polish PBN

<i>VABB-SHW</i>	<i>Inclusion criteria</i>	<i>PBN</i>	<i>Inclusion criteria</i>	<i>COBISS</i>	<i>Inclusion criteria</i>
Article	<ul style="list-style-type: none"> • It must be publicly accessible. • It must be unambiguously identifiable by an ISBN or an ISSN number. • It must make a contribution to the development of new insights or to applications resulting from these insights. • It must have been subjected, prior to publication, to a demonstrable peer-review process by scholars who are experts in the (sub)field to which the publication belongs. The peer review should be carried out by an editorial board, a permanent reading committee, external referees, or a combination of these. The review should contain input from outside the authors' research teams and be independent from the authors. Authors cannot organize their own peer reviews. 	Article	<ol style="list-style-type: none"> 1. Articles in journals indexed on the Polish Journal Ranking prepared by the Ministry of Science and Higher Education. This ranking organizes journals into three lists—A, B, and C: <ul style="list-style-type: none"> • The <i>A list</i>: Journals indexed in the Journal Citation Reports; • The <i>B list</i>: Polish (and until 2014, also foreign) journals without an impact factor; • The <i>C list</i>: Journals indexed in the European Reference Index for the Humanities. 2. Articles in foreign journals written in a foreign language (at least half an author sheet length). 	Article	<ul style="list-style-type: none"> • The first publication of original scientific findings in a way, that the research could be replicated and findings verified. (For the review article, the review of state of the art. For short article IMRAD structure not necessarily apply.) • Generally IMRAD structure is applied. • Peer reviewed scientific journal (review system transparent from journal's author guidelines)
Monograph		Monograph	<ul style="list-style-type: none"> • It must be a scientific paper. • It must present an original research problem. • It must be peer-reviewed. • It must contain a bibliography (or footnotes/endnotes); this criterion is not obligatory for the maps. 	Monograph	<ul style="list-style-type: none"> • Peer reviewed Scientific systematic and comprehensive all-encompassing treatment of a problem, question or subject, person, event It must be identified by CIP, ISBN (ISMN) • It must be published as a standalone volume or specific number of volumes published at the same time or defined time scale.
Edited book		Edited book	<ul style="list-style-type: none"> • Its length should be at least six author sheets. • It must be published as a standalone volume (not obligatory for the maps). The work was published online, or copies were sent to the libraries. • It must be identifiable by an ISBN, ISMN, ISSN, or DOI. 	Edited book	
Conference proceeding		Chapter	<ol style="list-style-type: none"> 1. The chapter (or map) length should be at least a half an author sheet. 	Conference proceeding	<ul style="list-style-type: none"> • Peer reviewed parts according to peer review for scientific articles or chapters

Book chapter			<ol style="list-style-type: none"> 2. Encyclopedia and dictionary entries should be at least one quarter of an author sheet. 3. If a book chapter is classified as a conference proceeding and indexed in the WoS, then the chapter length does not matter. 	Book chapter	<ul style="list-style-type: none"> • Part of the scientific monograph as free standing bibliographical unit (includes maps). Does not include papers on conferences.
