# Insights regarding social sciences and humanities obtained from studies of national bibliographic databases

**@ekulczycki**

**Emanuel Kulczycki**

Adam Mickiewicz University in Poznań  
Chair of ENRESSH

Member of the Research Evaluation Council in Poland

# Structure of Presentation

1. National databases versus Web of Science.
2. Publication patterns in the social sciences and humanities
3. Methodological challenges of studies based on the national databases.

Do we really know why we need national databases for the purposes indicated by us / government / policy makers / researchers?

If we need national databases, that means  
Web of Science / Scopus / Dimensions  
is not enough.

Is it really the case?

## Let's start from a small exercise:

1.

**What the WoS/Scopus do not allow us  
to know about SSH?**

...and we would like to know it

2.

**What the WoS/Scopus allow us to  
know about SSH and this is not the  
case of national databases?**

## **What are key differences between studies based on WoS/ Scopus and studies based on national databases?**

1. Coverage.
2. Publications types.
3. Publication in various languages.
4. Researchers not authors.
5. What can you say about country publication patterns?
6. Data almost ready to use (SciVal / InCites) vs. reach raw bibliographical data from national databases.

National databases versus Web of Science

# Total number of publications in eight European countries in the Social Sciences and the Humanities

Country	% of coverage in WoS
Poland	14.98%
Slovenia	16.05%
Slovakia	25.86%
Czech Republic	30.25%
Finland	38.34%
Flanders	39.76%
Norway	44.15%
Denmark	50.94%

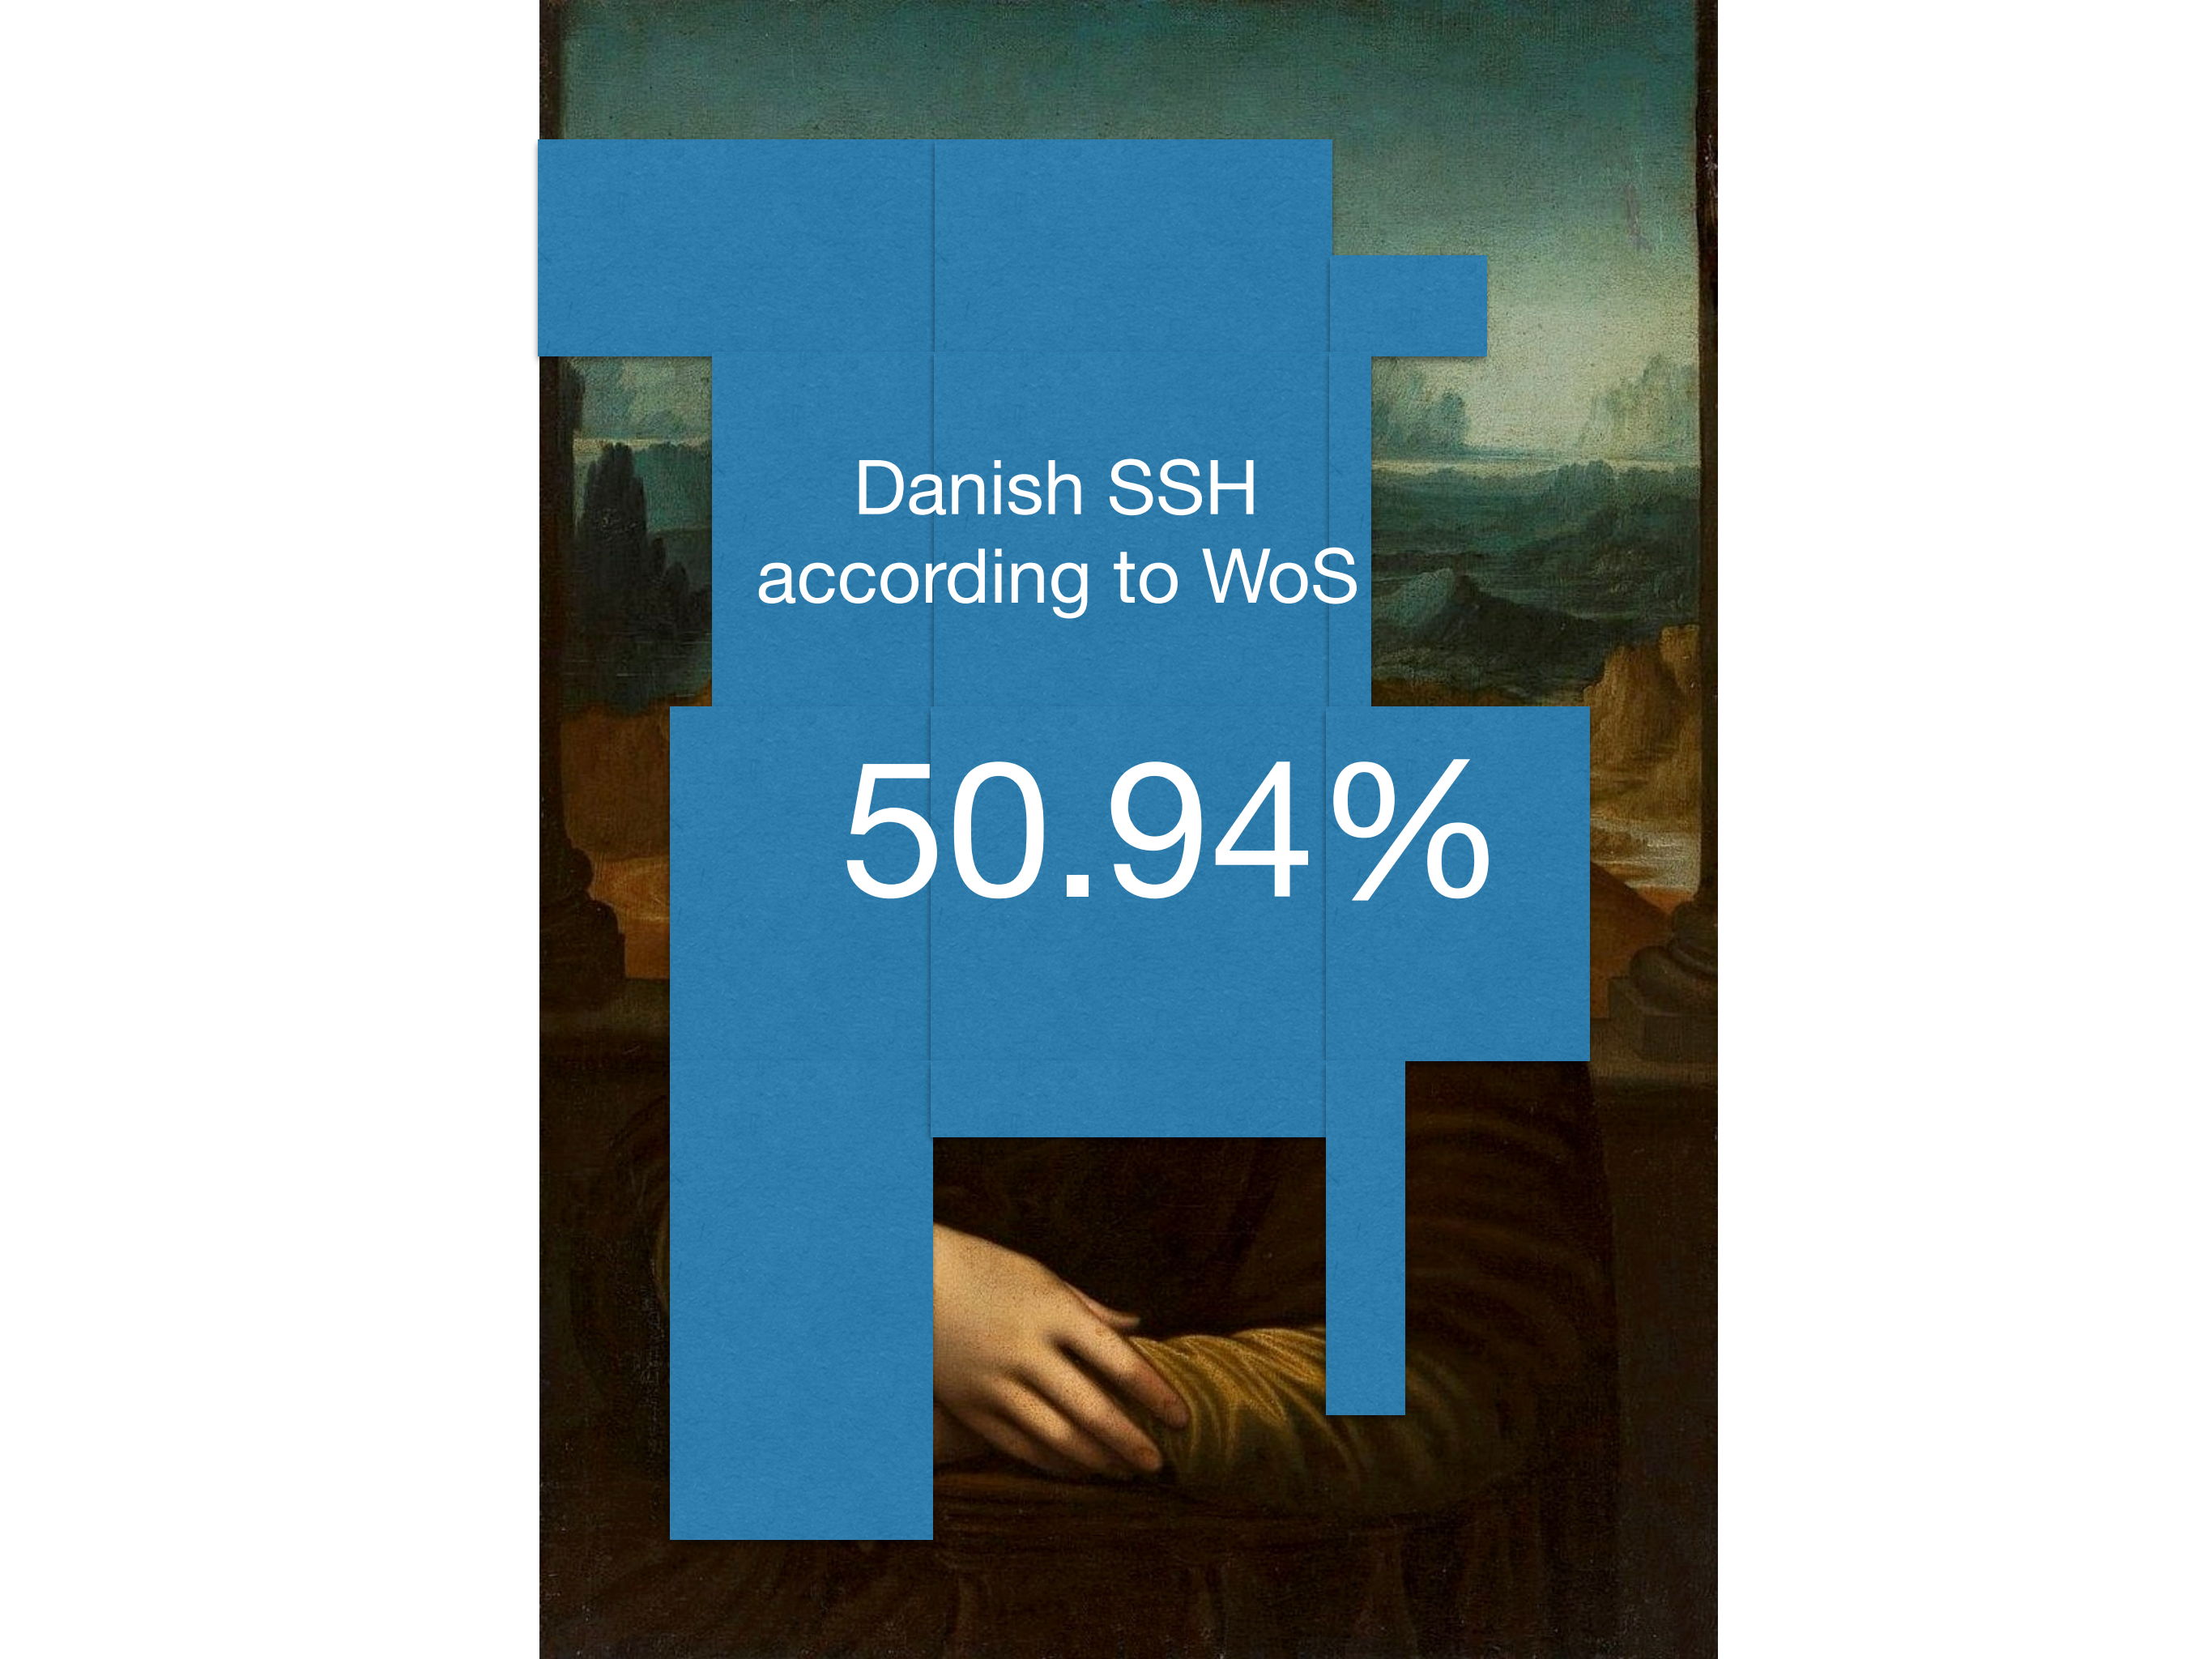

**What  
is it?**

Polish SSH  
according to WoS

14.98%

A vertical strip of a classical painting, likely a religious scene, showing a landscape and a hand. The painting is dark and moody, with a landscape in the upper half and a hand in the lower half. The hand is resting on a surface, possibly a book or a scroll. The overall tone is somber and contemplative.

Danish SSH  
according to WoS

50.94%

# SSH coverage degree according to the WoS

**Bibliometrics is focused mostly on publications.**

However, the picture of publication languages is substantially different, when we focus on researchers instead of publications.

**51,063** of SSH researchers from 7 countries:  
Czech Republic, Denmark, Finland, Flanders,  
Norway, Poland, Slovenia

**164,218**  
peer-reviewed articles  
from 2013–2015  
published in  
over 50 languages

E. Kulczycki, R. Guns, J. Pölönen, T. C.E. Engels, E. Rozkosz, A. A. Zuccala, K. Bruun, O. Eskola, A. Istenič Starčič, Michal Petr, G. Sivertsen, Multilingual publishing within the social sciences and humanities: A seven-country European study. *Journal of the Association for Information Science and Technology* (in revision).

The majority of these peer-reviewed journal articles in Czech, Danish, Dutch, Finnish, Norwegian, Polish, Slovene and Swedish are invisible in international databases:

**97%** of articles are not indexed in WoS and **92%** of articles is not in Scopus.

Multilingualism of researchers

# Language patterns of article publishing on the researcher-level across countries

Researchers who published at least three articles in 2013–2015

## 2.

Methodological challenges of studies based on the national databases.

# Methodological challenges of international comparisons

## **Areas:**

1. Completeness of the data.
2. Peer-reviewed publications.
3. Definitions of publications types.
4. Definition of a country.
5. Definition of national (local) languages.
6. Definition of a researcher / an author.
7. Discipline classification.
8. Understanding data with(out) experts in the national databases.

## Completeness of the data

**Czech Republic:** Researchers from all Czech universities, basic and applied sciences institutes.

**Denmark:** Researchers from all eight Danish universities.

**Flanders:** Researchers from all five Flemish universities, who are affiliated to a unit (research group, department, or faculty) classified as SSH. Emeriti and PhD researchers are included insofar as their publications mention an affiliation to a Flemish university.

**Finland:** Researchers from 5 out of 14 universities, of whose FTE in the years 2011–2012 at least 50 % was allocated to SSH fields according to the personnel and publication information provided to the Ministry of Education and Culture.

**Norway:** Researchers from the 4 largest (out of a total of 10) Norwegian universities who published at least three times (but not only articles) in the years 2011–2017.

**Poland:** Researchers employed by all Polish universities, basic and applied sciences institutes. In the study, we include all PhD level researchers who attributed SSH fields (mostly on the basis of their PhD) in the Polish current research information system.

**Slovenia:** Researchers from all Slovenian universities, basic and applied sciences institutes and other researchers who are registered in SICRIS system.

### Abstract

This article discusses the open-identity label, i.e., the practice of disclosing reviewers' names in published scholarly books, a common practice in Central and Eastern European countries. This study's objective is to verify whether the open-identity label is a type of peer-review label (like those used in Finland and Flanders, i.e., the Flemish part of Belgium), and as such, whether it can be used as a delineation criterion in various systems used to evaluate scholarly publications. We have conducted a two-phase sequential explanatory study. In the first phase, interviews with 20 of the 40 largest Polish publishers of scholarly books were
